Invasion of the Bloodsuckers

Bedbugs and Beyond!

Stages of Metamorphosis Fortune Teller

A. METAMORPHOSIS

1. Which type of metamorphosis has a pupal stage? _____
2. Which type of metamorphosis does not have a pupal stage? _____

B. SHAPE

1. Which immature stage looks completely different than the adult? _____
2. Which immature stage looks exactly like a miniature adult? _____

C. STAGE

1. Which stage of mosquito development is called a "wiggler"? _____
2. Which stage of mosquito development is called a "tumbler"? _____

D. MOLTING

1. What is molting? _____
2. Which immature stage molts? _____

E. FOOD

1. Do larvae eat the same or different food than adults? _____
2. Do nymphs eat the same or different food than adults? _____

F. HABITAT

1. Which immature stage lives in a different place than adults? _____
2. Which immature stage lives in the same place as adults? _____

G. DEVELOPMENT

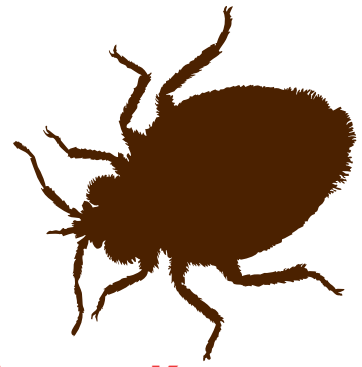

1. Which immature stage is also called a "cocoon"? _____
2. Which immature stage does not eat or move at all? _____

H. STRATEGY

1. Which immature stage does not compete with adults for food? _____
2. Which immature stage eats the same food as adults? _____

Invasion of the Bloodsuckers

Bedbugs and Beyond!

Stages of Metamorphosis Fortune Teller — Answer Key

A. METAMORPHOSIS

1. Which type of metamorphosis has a pupal stage? complete
2. Which type of metamorphosis does not have a pupal stage? incomplete

B. SHAPE

1. Which immature stage looks completely different than the adult? larva
2. Which immature stage looks exactly like a miniature adult? nymph

C. STAGE

1. Which stage of mosquito development is called a “wiggler”? larva
2. Which stage of mosquito development is called a “tumbler”? pupa

D. MOLTING

1. What is molting? shedding of exoskeleton
2. Which immature stage molts? nymph

E. FOOD

1. Do larvae eat the same or different food than adults? different
2. Do nymphs eat the same or different food than adults? same

F. HABITAT

1. Which immature stage lives in a different place than adults? larva
2. Which immature stage lives in the same place as adults? nymph

G. DEVELOPMENT

1. Which immature stage is also called a “cocoon”? pupa
2. Which immature stage does not eat or move at all? pupa

H. STRATEGY

1. Which immature stage does not compete with adults for food? larva
2. Which immature stage eats the same food as adults? nymph
